DETAILED ACTION

Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a bag, classified in class 383, subclass 6.
- II. Claims 22-26, drawn to a method of making a bag, classified in class 493, subclass 189.
- III. Claims 27-31, drawn to a method of using a bag, classified in class 53, subclass 459.

2. The inventions are distinct, each from the other because of the following reasons:

a. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make another and materially different product:

- i. such as a bag in which the reinforcing strip is not formed from synthetic resin film as required by claims 1, 15 and 20;

Art Unit: 3721

ii. such as a bag with different dimensional characteristics than that set forth in claim 15; and

iii. such as a bag without wicket holes as set forth in claim 20.

Further, the product as claimed can be made by another and materially different process:

i. such as the bag defined by claim 1 can be made without bonding as required by claim 22, but only joining which can be done in other manners;

ii. such as the bag defined by claim 15 is made with thermal bonding which is not required by claim 22; and

iii. such as the bag defined by claim 20 can be made without bonding as required by claim 22, but only joining which can be done in other manners.

b. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as the bag of claims 1-20 could be used by

Art Unit: 3721

itself or it could be used in a process in which the bag is not hung, but rather filled manually and then hung for displace purposes.

c. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of making a bag and the method of using a bag having different modes of operation and different functions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for any one of Groups I, II or III is not required for any one of the other Groups, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Stephen Gerrity**. If attempts to

Art Unit: 3721

reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Rinaldi Rada**, may be contacted. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the **Group 3720** receptionist.
